## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-10, drawn to an isolated nucleic acid comprising a segment of CMV that encodes IL-10, a method of making and a first method of using the product.

Group II, claim(s) 11, drawn to a method of treating a patient that responds to treatment with IL-10 by administering a compound capable of sequestering IL-10.

Group III, claim(s) 12 and claim 13 (pertaining to detecting and purifying the protein), drawn to a method of detecting CMV in a sample.

Group IV, claim(s) 13, drawn to detecting and purifying a CMV IL-10 nucleic acid molecule.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of group I is drawn to an isolated nucleic acid molecule encoding a segment of IL-10. Any subsequent group that does not share this special technical feature lacks unity of invention with the first group.

The special technical feature of group II is a method of treating a patient that responds to treatment with IL-10 by administering a compound capable of sequestering IL-10. This group lacks unity of invention with group I because this method uses a different product from the one defining the special technical feature of group I.

The special technical feature of group III is a third method, drawn to a method of detecting CMV in a sample. This group lacks unity of invention with group I because this method uses a different product from the one defining the special technical feature of group I.

The special technical feature of group IV is a fourth method, drawn to a method of detecting and purifying CMV IL-10 nucleic acids in a sample. This group lacks unity of invention with group

I because this method uses a different product from the one defining the special technical feature of group I.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
